---

***Made in the USA represents our dedication to American values, ingenuity, and a legacy of excellence.***

Lonestar Completion Tools values the fact that all of our products are designed, manufactured, assembled and inspected in the U.S.A.

We have never and will never outsource to other countries, even though this is becoming the industry norm because of cheaper manufacturing costs.

**Our Economic Impact:** Manufacturing our products in the USA supports U.S. communities, creates jobs, and contributes to the growth of the national economy.

**Our Commitment to Innovation & Integrity:** American-made products are synonymous with innovation and cutting-edge technology. We develop our ideas independently and we don't rely on imitating others. We operate with unwavering integrity and prioritize innovation over imitation.

Our focus is not on the performance of our competition, instead we focus on serving our customers. We aim to set the highest standard for frac plug excellence in the industry.

**Our Quality Control Standards:** By producing domestically, we maintain complete control over our manufacturing processes, guaranteeing exceptional craftsmanship and superior product performance. We also have an entire team in our Houston location that fully inspects each product that goes out of our doors and into the field.
