

ONErun™ Patent Pending

WET SHOE CASING TEST INITIATOR

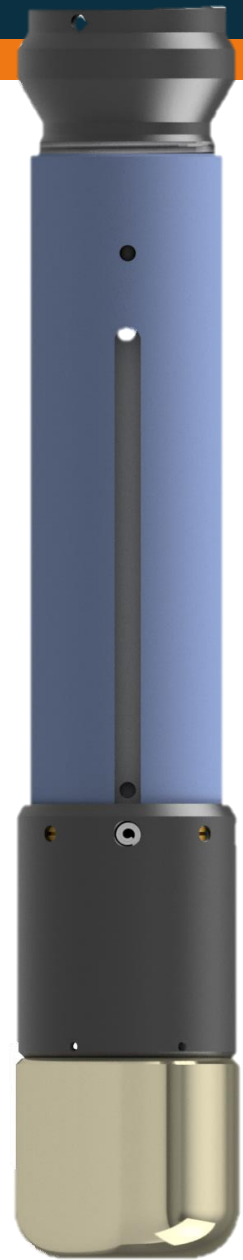

- No wait time after dropping the ball and conducting a casing test
- Dissolvable dummy plug gauges the casing for obstructions and enables the operator to release in the event the wireline BHA becomes stuck.
- Adaptable ball holder and dummy plug allow for up to 2.000" balls to be deployed.

FEATURES

Many operators have reverted to the “wet shoe” two plug style system due to its simplicity, reliability & efficiency. The Lonestar ONErun™ wet shoe casing test initiator allows for the operator to pump their guns and setting tool to depth, fire the setting tool, release the ball during the stroking of the setting tool and setting equipment, perform the casing test, and finally shoot their guns that are already on depth.

This eliminates the common wet shoe system issues seen historically in the industry which was their inability to allow the operator to conduct a casing test without setting a bridge plug or dropping a ball during toe preps.

Ultimately, the Lonestar ONErun™ offers a reliable and cost-effective alternative to bridge plugs that will ensure the operator saves time and money.

Lonestar ONErun™ Specifications

Casing Size	Tool OD	Dummy Plug OD	Ball Size.	Length	Dummy Plug Available
